

CHINA 30•60 SEMINAR SERIES

Implications and Opportunities for German Companies

China has promised that its carbon dioxide emissions will peak by 2030 and that the country will become carbon neutral by 2060. This pledge has implications for German companies in China, which may need to upgrade their facilities and optimize their processes.

China's economy, industries and energy mix need to be restructured in a greener way in order to become more modern and resource-efficient. Businesses need the newest technologies to achieve these goals, and the newest technologies are green. This creates opportunities for German technology leaders that offer innovative products and services and integrated solutions.

The "China 30•60" seminar series is intended to support German companies in China in their decarbonization efforts, present practical approaches to reduce carbon emissions and increase energy efficiency, and to provide a platform for exchange of best practice from businesses for businesses.

Target groups for the "China 30•60" seminar series are German companies in China, businesses from climate tech sectors in Germany, industry and business associations, AHK and IHK member companies, LBBW customers, etc. A particular focus is on small and medium-sized enterprises.

The "China 30•60" seminar series is organized by German Centre Beijing and AHK Greater China / econet china. The seminars are taking place on-site in Beijing and online via MS Teams.

SAVE THE DATES

RENEWABLE ENERGY
